- Information Button

Decision Note

- Remove Inventory system for Increase player challenge So player can't to pick weapons more than 2 and can't to pick potion to use in the future
- Add Exp system for make player improve enough to fight with enemies in higher level
- Remove Artifact system for simplify because now the game already uses combination of weapons skill if add Artifact system player will be to use more memory to remember. Remove to reduce game's scale

Decision After pre production

- reduce the number of skill combination from 2 skills to 1 skill if count with weapon's skill it will reduce from 4 skills to 3 skills the reason for the reduction was to increase the time for adjusting Game Balance.
- reduce the number of floor from 20 floors to 5 floors the reason for reduce is because in part of enemies have difference type of enemies only 4 type so if player go higher level it will make player boring because the game no variety of enemies (in this part can add more level in the future)
- remove chest rarity system to do other system
- change tutorial from first version that show only text to tutorial use uses a conversation between the game and the player, which at this point helps the player to gradually understand step by step.
- In designing each floor, the chests must be placed away from the walls because if placed next to them, monsters have a chance of spawning outside the screen
- skill combination between Spear and Dagger now player don't take any damage when use this skill because first time we want this skill can knock back enemy but have error so changed it.
- move weapon UI's position to bottom right because skills UI's position is bottom so the focus points of the players will not be spread out much.
- Now player can see number of damage that enemies take when attack enemies from before player can see only enemies turn to red color when they take damage because we want the player to be able to know their own current attack power.
- player cant pick weapons when have enemies because want to protect from spam to open many chest and to challenge player so if player forgot to pick weapon player will fight with current weapon that you have.

- In the normal attacks of ranged weapons, before that can used to attack through but now range weapons can't used to attack through because range weapons is over power that can kill enemies in early.
- add restore HP and mana when player level up because the Game has very few ways to increase health and mana, players choose to take the risk of opening to farm level from enemies more.
- Audio system can split between Music and SFX because sometime Music can drown out the SFX.
- decided to stop enemies when attacking player Otherwise enemies will running non -stop and that make game too difficult.
- change from edit information in code to edit in inspector or edit in folder scriptable object for the convenience of game designer in balancing.
- change from when open the chest player can open only one until open finished to player can open many chest in the same time.

Game and Mechanics

Gameplay

Core Game Mechanic :

Tower of Hope is roguelike game that when player die they start over from the beginning and start everything from zero. The player must find the key to open the portal to go to the next floor from the chests located on the Map on each floor. Inside the chests player will have the opportunity to found the following

- weapons 20%
- enemies 70%
- the key 5%
- nothing 5%

Different weapons will have different skills. And also has additional skills from holding 2 weapons.

Game's target is find the key to go to the last floor and defeated the boss to go out from The tower

Combat System :

Combat system in this game will use 2 type of weapons namely using range weapons and melee weapons and each type of weapon has different skills. but player have freedom to can create combo from weapon that player use with each weapon having its own skill and player will get new skill from 2 weapons that player hold. player can hold 2 weapons and can change weapons to replace the weapons player are holding.

Stat Player :

- HP - player's health
- Mana - player's mana
- Dmg - player's damage
- Exp - point to up player's level

Stat Upgrade :

Player get Exp from defeated enemies for upgrade player's stats.

Progression :

Let players feel the challenge of not knowing by having to open a chest without knowing what to expect after opening the chest and there is also skill system by weapon having its own skill and player will get new skill from 2 weapons that player hold.

Tutorial System (Old)

Tutorial system for new players Let's understand the game system.

Use F to pick weapon

Use F to open chest

Have enemies for player to try to attacking

When found the key

When found the portal if already have the key use F to go the next floor

Tutorial System (New)

In the new tutorial version the game will teach you, with text messages. The training will be divided into 5 parts:

- Pick up item
- Open chest
- Attack
- How to get the key
- How to go to the next floor

Level System

In part of player's level player will get EXP from defeated enemies each type of enemies gives different amounts of EXP and as the level increases, more EXP is required. When player levels up, they will gain the following stats:

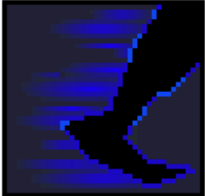

Damage +2

HP + 20

Mana +50

Level Design

Game will have total 5 floor and if player go higher floor enemies will more difficult and have more chest from previous floor

Floor Tutorial

Floor 1

11 chests

Floor 2

16 chests

Floor 3

21 chests

Floor 4

23 chest

Boss floor

For the boss floor, we designed it to be small, so we made the boss immobile and positioned it at the center of the room. We've also added walls to allow players to dodge the boss's attacks.

Main Character

Stat Player :

HP: 50
Mana: 100
Speed: 5
DMG : 2

Enemy & Boss

The formula to increase the damage and health of monsters as they advance to the next floor is as follows: :

DamageWhenChangeFloor

AmountOfHealthWhenChangeFloor

The formula to increase the damage : $\text{CurrentDamage} = \text{CurrentDamage} + \text{DamageWhenChangeFloor}$

The formula to increase the health : $\text{CurrentMaxHealth} = (\text{CurrentFloor} + \text{AmountOfHealthWhenChangeFloor}) + \text{CurrentMaxHealth}$
